SUMMARY

Full-stack developer (BSc-IT, 3rd semester) who independently designed and shipped PrintOK, a multi-service payments-and-print platform spanning a REST API, a native Windows background agent, and cloud deployment. Comfortable across the stack from database schema to payment integration to CI/CD.

TECHNICAL SKILLS

Languages

JavaScript
TypeScript
Python
SQL
HTML
CSS

Frontend

React
Tailwind CSS
responsive/vanilla JS UI

Backend

Node.js
Express
REST API design
WebSockets

Databases

PostgreSQL
Supabase
Prisma ORM
MongoDB

Cloud & DevOps

Docker
AWS S3
Render
Vercel
GitHub Actions (CI/CD)

Other

Git/GitHub
Razorpay payment integration
Jest
VS Code
Cursor
Claude
Antigravity

PROJECTS

PrintOK [print-ok-customer-web.vercel.app](https://github.com/Ayan-css/PrintOK)

2025 - Present

- Hardware-Free Print-on-Demand Platform; Node.js, Express, TypeScript, Prisma, PostgreSQL, C# .NET 8, Docker, Razorpay | Repo: github.com/Ayan-css/PrintOK
- Designed a QR-based ordering system for customers to upload and pay for print jobs from their phone, with a background agent routing jobs to a shop's existing Windows PC and printer - no new hardware required.
- Architected core business logic: decoupled payment and print state to prevent double-charging, priced jobs in integer paise, and froze each job's rate card at quote time.
- Built a REST API (Express + TypeScript + Prisma/PostgreSQL) covering job lifecycle, agent pairing/credential revocation, and an admin console, backed by 43 automated tests including a Postgres integration suite.
- Integrated Razorpay payments (webhook signature verification) and AWS S3 for document storage.
- Built a self-contained C#/.NET 8 background agent for the shop-side Windows PC, deployed via GitHub Actions to GitHub Releases.
- Deployed across Render (API), Vercel (frontend), and Supabase (database/storage) with CI/CD on push to main; validated the order-to-payment flow end-to-end.

Additional Practice Projects github.com/Ayan-css/Porejects

- Built six standalone JavaScript/HTML/CSS applications (expense tracker, e-commerce cart, to-do app, weather app, quiz app, project management tool) to practice DOM manipulation, state handling, and API integration.

EDUCATION

Anjuman-I-Islam Kalsekar Technical Campus

BSc, Information Technology

Apr 2025 - Present

New Panvel, Maharashtra

- **GPA:** 9.5 (Sem 1), 9.65 (Sem 2)
- **Achievements:** president of Rise Club
- 3rd Semester (in progress)

CERTIFICATIONS

- Google Developer Student Jam: Google Developer Groups

LEADERSHIP & ACTIVITIES

Git & GitHub Hands-On Workshop

Co-Instructor & Host

- led a live, hands-on session teaching version control fundamentals to peers.

Igniters Club, AIKTC (via Unstop)

Media Team Member

- supported event coverage and content for a college tech community.
